It is also known to make good peripherals, like external devices for such an equipment. The ASUS notebook line provides a complete set of items such as keyboards, mice, adapters, power cords, display docks, wireless receivers, etc. For a laptop user these extras can be useful but even more so if the value for money is reasonable. One such laptop accessory is ASUS Slimpad+, an adapter that can turn a flat keyboard into a tent. To do that, you only need to connect the Slimpad+ to the notebook's keyboard and apply some pressure to its top. The weight of the tablet will bring it down, thus offering a comfortable set-up and even better keyboard access, especially while typing, and also for tablet users. The downside is that this is a dock that is separate from the notebook. Thus, you need to remember to carry it with you and connect it whenever you need to use the tablet, a little inconvenience. However, if you plan to use your notebook with the tablet more often, the ASUS Slimpad+ is definitely worth it. In fact, many users find the Slimpad+ to be one of the best accessories that ASUS offers. ASUS Slimpad+ Description: Benefits: It can be used to type in an upright position or, with the right amount of pressure, it can tilt your tablet. ASUS uses lightweight and durable magnetic components to create a smart connection. A powerful lithium-ion battery with up to 10 hours of battery life can power it. Features: The Slimpad+ can be used as a tent to add comfort to the notebook's keyboard and as a stand for tablet PC use.
