The Patch tool allows you to select individual pixels in a document and then insert them in a different location. The Brush Tool allows you to edit images in fine detail. The Brush Tool also works like the eraser in drawing programs (the BACKSPACE key). The Gradient tool allows you to pick colors and gradually change them over a specified area. The Gradient tool is great for creating gradients in a photo. The Camera Raw commands are used for photo editing. These include White Balance and Contrast tools, as well as the aforementioned Clone Stamp. The Marquee tool allows you to create a selection, which you can then use to paint on the image. The Marquee tool works best in the shape of a rectangle, a rectangle with a square inside, or a circle. The Magic Wand tool allows you to select all the pixels (and sometimes objects) in an image. The Free Transform command allows you to stretch and shrink the size of an image. Once again, this works best with one of the preset shapes. The Smudge tool allows you to blur an image. The Dodge tool allows you to "burn" an area of an image that is a lighter color than the pixels around it. The Blur tool allows you to blur the images. The Pen tool allows you to select certain pixels in an image and then move them to another location. The Paths tools allow you to create vector shapes which can be adjusted and edited as needed. The Adjustment Layers tools are used for editing color, contrast, levels, hue, saturation, and brightness. The Selection tools allow you to make the selections or paint over the selections you've made. The Channels dialog allows you to delete, copy, move, or resize individual channels in the image. The Lens Correction allows you to straighten the images. The Sharpen tool allows you to increase the "sharpness" of an image. The Smudge tool allows you to blur an image. The Fade tool allows you to soften an area in an image. There are a multitude of other features, such as masking, perspective control, crop, perspective control, retouch, etc. The following links have really good tutorials on different Photoshop tools: ► ► ►
