Love letter of great men book pdf free download.-amyloid plaque burden in the hippocampus was similar to that of the spiny eel Immunocytochemistry, analysis of A β and Congo red, and ELISA {#Sec8}

----- Rabbits were deeply anesthetized using a mixture of Tricaine methanesulfonate (400 mg/ml) and Algavert[®] (100 mg/ml; Sigma-Aldrich) and fixed by perfusion of freshly prepared 4% paraformaldehyde (Wako, Tokyo, Japan) at pH 7.4. Transverse hippocampal slices (400 μ m thick) were obtained and fixed overnight in the same fixative at 4 °C and then washed three times with phosphate-buffered saline. They were then dehydrated in 30% sucrose at 4 °C. Whole brain samples were fixed with 4% paraformaldehyde overnight at 4 °C. All other steps were performed as previously described[^][@CR11],[^][@CR12]. Using the rabbit anti-amyloid beta peptide \[1--16\] antibody (1:250; Abcam, Cambridge, UK) as the primary antibody, immunostaining was conducted at 4 °C overnight. The second antibody used was goat anti-rabbit IgG conjugated with Alexa Fluor 488 (1:1000, Life Technologies, Carlsbad, CA, USA). For A β immunostaining, sections were labeled with the oligomer-specific monoclonal antibody, clone OC (1:100; Thermo Fisher Scientific, Waltham, MA, USA). The confocal images were acquired using an A1RMP-SI microscope (Nikon, Tokyo, Japan). Next, we estimated the total load of A β within the hippocampal CA3 subfield and other brain areas. We employed the clone OC, which recognizes oligomeric A β , and the rabbit anti-A β (1--16) antibody, which recognizes primarily monomeric A β . To reveal more detailed A β distribution, the clone OC antibody was applied for the following secondary immunostaining to identify
