Contents show] History AutoCAD (1982–present) AutoCAD originated in 1982 when electrical engineer John Walker and electrical engineer Roger Bresnahan, who were working on a design project for a machine shop, were left with a need to design a part using a curve on a contour that could be fitted to a profile. Because neither of them had any prior experience with a computer, they had no idea how to create a part and required computer-aided design (CAD) software to help them. Walker and Bresnahan, with the help of electrical engineer John Jones, went to a local computer store where they asked to see the word processor installed on the computer. When they were shown the word processor, Walker and Bresnahan were impressed at how well suited it was to drafting. They then asked the store manager if they could install the word processor on the computer. When the manager agreed, Walker and Bresnahan, with Jones's help, used the word processor to create a drawing using a curve, and they realized that they had created something that was suited to use in a CAD environment. In November 1982, the first version of AutoCAD was released to a limited number of beta testers. The test group was very enthusiastic about AutoCAD, and the positive feedback from the testers prompted Autodesk to continue development of the program. After it was finalized, AutoCAD was launched to the public in December 1982. When AutoCAD was first introduced, the graphics program that was available to the general public was called AGRAPHICS. AGRAPHICS had been developed by VisiCorp in 1977 for the VisiOn (DEC VMS operating system), and by 1981 VisiCorp had released the first version of AGRAPHICS for the Apple II. AGRAPHICS was available in a few different versions, ranging from AGRAPHICS 1.1 through AGRAPHICS 3.1. VisiCorp made a version of AGRAPHICS 3.1, called AGRAPHICS 4.0, available for the Apple II in 1982. VisiCorp did not continue development of AGRAPHICS 4.0 after this point, and A

While a drawing or feature class object's reference point set is a single point (any point), a drawing object is associated with a set of specific reference points. Reference points can be thought of as "anchors", which define the position of a drawing object in the model space. The location of the object's reference points can be changed by the user at any time, or by other applications. Application exchanges are objects that contain a description of a drawing (e.g. all drawing layers and other objects), but that also contain properties that allow the exchange to be executed within AutoCAD. AutoCAD's exchange format is compatible with Autodesk Exchange Apps. Feature class object references A feature class object reference is a string representation of a drawing object reference point, such as the point A in the figure below. A feature class object reference is used by the following tools: AutoCAD's custom properties tool AutoCAD's custom blocks tool AutoCAD's AutoLayOut tool AutoCAD's AutoModel tool AutoCAD's autosave or session manager AutoCAD's export to PDF feature References Category:Computer-related introductions in 1983 Category:Autodesk Category:Autodesk softwareQ: make N autoref go to top of page? I'm using cleveref, if a reference is like A~B, it will be type referenced to A and after B, B's reference is too. I would like to make N autoref go to top of page. I've tried a solution that I think can work, `\def\ref#1{\label{#1}\pagebreak[1]}` but it failed. does anyone know how to do it? A: You can accomplish what you want by using the `\clearpage` in the cases you want, but that's going to require that your references are of the form `{A~B}` or `{A~B~C}` rather than `{A~B}`. The problem is that the regular `\pagebreak` does not go up to the top of the page. So, you might make it go to the top with something like this: `\documentclass{article} \usepackage{cleveref} \def\ref#1{\label{#1}% \clearpage% \page ca3bfb1094`

Open a New Project window. Autocad connects to the Local File Server so you don't have to change your location settings. Click on File>New>Direct3D User Interface Project. Change the file name and location if necessary and uncheck Load Local, then click OK. Open the.ldr file. Note the ID for the interface you chose. Open the.acad file with Autocad and click on Toolbox. Add the udt_interface DLL from the root Autocad folder to the lib object library. Click on the acad command (While holding the CTRL key) On the command line in the direction of the arrow cursor. Choose the interface ID you chose. Choose udt_interface as the file to import. Choose the udt_interface_1.acad file. Click on OK. The udt_interface DLLs are used for Interfaces. To use the interface: Type interface_name. Autocad displays the interface for editing. Double click on a command to run it. 77 Ill.
