I have a domain I have purchased at cybersource.com and pointed to my server. However it doesn't look like cybersource.com can point to the path I have set. So I googled and found out that I need to create a folder entry. They do this through an API that I am not familiar with. I tried doing this but it seems my server returns Unauthorized. Is there a way to get cybersource.com to point to my server and also create a folder under /? A: You cannot do this via a normal API call - but it's possible to make it work using Open Directory API. First, you can ask someone to manually map your domain name to a URL (e.g. redirect cybersource.com to Google's DNS records) or update your server records so that the IP address goes to cybersource.com. Then, you can create an Open Directory account

Link: A: Just enter the serial number in web browser and get the crack! Q: Change AngularJS filter based on variable from the controller Is it possible to change filters based on variables from the controller (or scope)? The use case is the following: there are two separate lists of books, of which one is filtered using `$filter('filter')` and the other is not (`$filter()` doesn't work, because it only takes one filter string - even if there are two). `$scope.books = function() { return books; } $scope.emptyBooks = function() { return books.length == 0; } $scope.emptyBooks = $filter('filter')($scope.books(), {}, 1); I'd like to`

remove the emptyBooks function and let angular do the job automatically by setting something like `$scope.empty = "something"`.

Hope you can help me :) A: Just use an expression? `$scope.books =`

```
$filter('filter')($scope.books(), {}, 1);
```

```
$scope.emptyBooks = function() { return $scope.books.length == 0; }
```

Either way, the real answer here is that the books list can be

changed in your controller. Q: Указание промежуточного файла для загрузки проекта в Android Studio Добрый день! Народ, помогите мне найти в Android Studio подобное утилитарное приложение, достаточно бы при нажатии на соответствующую
