
Download PhotoShop cs5 version for Windows 7

Not all Photoshop images need to be photo-edited: You can use Photoshop effectively to edit and manipulate images for non-photo purposes, too. The layers and palettes of Photoshop make for an intuitive and powerful tool to

work with images. The sheer amount of options and the ability to erase layers and reorganize them makes for an agile tool that you can use intuitively. When you first open Photoshop, it can seem overwhelming to a new user; you may have to fight through lots of images or a large file —

downloading it or uploading it from another application — to get to the step you want to do.

Depending on the number of layers in the image, you may have to search for a few minutes to find the layer you want to change.

Therefore, it may be helpful to have a smart folder to organize

your files and images on your computer. (Check out Book IV, Chapter 2 to find out more about organizing and smart folders.) You can export your image to a different format, such as GIF, JPEG, or TIFF, to make a copy of the image or to send it to another application. Figure 10-1 shows the

Layers palette with the Image Adjustment tool's options.

Creating and formatting a document Although the image-editing programs are powerful,

they don't do much without a document. Each one can open files saved in specific file formats. The program offers its own native formats as well as the ability to open another application's document. There are many options for producing documents. Here are a few of them: You can choose

the destination and the type of document to create. You can save a file as a .psd file or an .eps file, which is a bitmap graphic format. (These file types are covered in more detail in Book II, Chapter 2.) You may find that the format you choose makes a difference in how your file performs on a specific

publication. For example, if you create a.psd file and then export it to a.eps file for output to a laser printer, it doesn't matter what happens to the.psd file. However, if you create a.psd file and choose to export it to an eps file for a bitmap to output to a device like an epson printer, you may see
