It has been reported recently that some halogen compounds may be carcinogenic and induce allergy. Thus, safe and efficient adsorbents for halogen compounds, such as methyl bromide and bromomethane, have been searched for. Known adsorbents include a zeolite containing Ca, which is expensive and less active. Ammonium ion-exchanged zeolite is used for removing methyl bromide. The activity of this zeolite, however, is low. On the other hand, known adsorbents for bromine include a zeolite containing K, which is expensive and is also problematic in that the K cations in the zeolite are released into the atmosphere as water during thermal decomposition, the adsorption temperature must be as high as 250.degree. I feel that the opposite would be more accurate: it was the end of the Cold War, because it meant the end of the Cold War inside our borders. So it was the beginning of the long process of destroying the borders between countries. The desire to make peace with the soviets was the beginning of the end of the Cold War, not the end of the Cold War. --- kiba _The desire to make peace with the soviets was the beginning of the end of the Cold War, not the end of the Cold War.
