NeoCrypt

NeoCrypt allows you to encrypt text files with multiple algorithms that will cause them to open only if you use correct passwords, which you can control via the built-in interface, allowing you to create as many passwords you want. Each algorithm has its own properties, so you don't have to choose just one. You can save your passwords in a simple text file that doesn't contain any private information, and give it to NeoCrypt. It's that easy. Use one of the options at your leisure. Then you are good to go. NeoCrypt will be stored in your personal space which is separate from your system. Furthermore, you are going to have the option to create an archive with multiple files. The archive can be encrypted using any of the passwords that you have. Alternatively, you can lock any of the files in the archive. To achieve this, you can open any of the files and choose to make them password protected. We can't guarantee that this product will not harm your device. NeoCrypt is a very advanced tool that needs to be treated with respect. You should only run it if you understand what it is and how it works. This product should be used as a tool and at your own risk.
