You can choose between playing a Tourist, Driver or.Q: Add Multiple PDF Files in Java I'm writing a program that can read in multiple PDF files and output all of the text from them in the same format. The text is stored in a character array (with line breaks) and I have a class that reads in these strings and then writes them out to a new file. I was wondering if there's a way to read in multiple files and output all of the text from them at once. For instance, if I had three PDF files called book1.pdf, book2.pdf, book3.pdf, how can I output all of the text from all of the PDF files to a new file at once? Would I need to first determine the last page (if they're all numbered) and then have a for loop for each page (1-12)? Or is there a way to read in multiple files with just one input and output method? Thanks! A 6d1f23a050
