with the advent of the internet, many users today may design for the first time using a web-based drawing application, such as autodesk web app, or an internet browser such as internet explorer, firefox, chrome, and safari. drawing applications have also become available on mobile devices. autodesk has developed an application called autocad 360 (formerly autodesk mobile 360), which works on ios, android, windows phone, and windows 8 tablets. autodesk has also developed an application called autocad mobile, which is compatible with windows, mac, and ipad. the dwg file format is also used by many cad software developers to save design data created in other programs. for example, many cad software programs allow a user to open dwg files created by other cad software programs, such as autodesk inventor, autodesk autocad, and autodesk maya. autodesk has also developed a wide range of integration solutions that allow users to open dwg files in autodesk products. in autocad, you can create or edit drawing objects using various commands. but autocad allows you to put in the entire drawing content in a single file and get back to it. this is helpful in case of doing the same drawing multiple times. you can use custom commands as well to do everything in the drawing. these custom commands are in the form of macros. when you look at the autocad release notes for 2019, you will see that the latest one is 5.0.1. in the earlier versions of autocad, you could not execute macros from outside of autocad. however, with the help of the autocad macro dialog, you can create macros and run them from any other drawing file.
