Creating a layout in Photoshop is a lot of fun and can be very rewarding. To create a good layout, you need to have a basic understanding of Photoshop and how it functions. First, you need to know what layers are - they are the basic building blocks of a photo editing application such as Photoshop. They allow you to add, move and edit photos, shapes, text, and other materials. To manipulate these materials, you can add, move, and delete them. Adobe Photoshop allows you to work on multiple layers to create complex images and to specify exactly how materials interact.

The interface is tiny; it just makes sense inside the program. Adobe removes many many controls and options from the larger Photoshop. Elements 20 is only available for Windows, and is for PC users—not Mac users. You can't run it in a Mac Dock, either. The area where Photoshop Elements 20 Ultimate does everything is compact and easy to do what you need to do. All the options and controls you need are located here, so you don't have to hunt for them. In this quick demonstration, I'm resizing a 4-MP JPEG as a proof. I've set the black point at 0. I have the Clipping and Resize tools set to the Percent option. This lets me clip to the small area shown on the right, then resize by less than 100 percent. The Clipping tool is the ruler that shows what area is selected. As you can see, the area is being cropped to just 5.34 by 4.57 inches, while maintaining sharpness. This is easy to do. Perhaps more importantly, you can figure out almost all the values required for settings like these by using the histogram that's tucked into the right corner of the interface. Here's what that looks like in Photoshop Elements. "Back when I was a kid, designers always thought about things in terms of print and digital media. Now global challenges that we're confronted with are those around the physical release of software and hardware." The definition of a designer as a creative person highlights how important the role of the designer is becoming. **"As the creative work becomes more integrated in the service of business, a new worker will emerge, with a unique and powerful set of skills and abilities who is responsible for understanding the firm's strategic objectives, interpreting its purpose, and then developing distinctive solutions for problem-solving and customer-facing matters."** (The Business Design Network, 2010.)

To begin, you get a quicker workflow by not having to re-export for your edits. Adobe remembers your last filter, so you can tweak a filter and immediately see the effect on your image after you're done. That's not all. You get to the fixing stages faster as well. As you begin the normal workflow in Adobe Camera Raw (ACR), you're more likely to end up with better photographs with less mistakes. The rub-off feature will solve the problem of not having an appropriate lense for your subject. This fills in the edges and streaks without having you manually stray from the subject. Adobe Camera Raw is available to all users of Adobe Creative Cloud. To download ACR, go to your Creative Cloud Console, sign in, and go to your Account > Your Apps > Adobe Camera Raw. Follow the on-screen instructions, and you're ready to rock 'n' roll! If you don't have a Creative Cloud subscription, or you're looking for a cheaper alternative, Adobe Photoshop is the way to go. It's readily available at your local retailer or online. Easy! All you do is bring up the menu bar and click the photo until it resembles the original image. Adobe has published the guidelines you'll need to follow to get professional-level results. First of all, you should make sure that your device has the necessary processors and the RAM to process the images right. A sandbox or a quality processor is important as these will make sure the work you're doing is done as efficiently as possible. Clean up the distractions, like in the previous tip, and then start to go through your image by going back to individual objects in your photograph. Pick or touch an area of a certain color and make a selection. If you have a selection applied, you'll see several blue and green boxes highlighted. This is where you can go to fix the colors. When you're done, save your work, and then go into your photo on the other device to see how well you've done. This is the best way to make sure you're getting the best results. 933d7f57e6
