**What's New In Tubeesview?**

Tubeesview is an image viewer freeware that supports popular image file formats, such as: BMP, GIF, LBM, MSP, GIF, JPEG, PBM/PGM/PPM, PCX, PCD, PCT, PSP, RLE, SGI, TGA, TIFF. It also supports some multimedia: AIFF, ASF, AU, AVI, MP3, and MPEG. Tubeesview is an efficient application that will allow you to view popular image formats and also perform basic photo editing. Some basic image manipulations are provided at hand to users: image information display, reduce color depth, invert color, image rotation to any angles (with preview), and multi undo/redo. Installs by floppy and also by DOS batch install.

Review TUBEEVIEW I'd like to start with a word of caution. Tubeesview was written for the developers only, and there is no published standard for image file formats and utilities. There are no 'official' standards and no guarantee that Tubeesview will work with a particular file format. If you use Tubeesview and find that you cannot view a file you were expecting to view, then you probably used the wrong application for the file type. Unfortunately, if this happens to you, there is no way of knowing which file format you used. I will not be able to resolve your problems. If, on the other hand, Tubeesview works with a file type you were expecting, then you will have a powerful tool for the job. If your computer is using Windows 95/98/Me, then you will need to download the v1.0 of Tubeesview in order to view the popular image formats. If your computer is using Windows NT, then the v1.0 of Tubeesview is already installed on your system and you do not need to download it. As I mentioned earlier, the download is in ZIP format, and the ZIP file also contains an installation script which will allow you to install the program on your machine. (I do not have DOS installation disks for most machines so I do not know if you need to use a DOS batch file for this.) The ZIP file contains a 'README' file which has some useful information on the program. There are three ways you can use Tubeesview: you can run the program directly from a floppy or from a DOS batch install file, or you can configure the program to run as a service. The first method, to run the program directly, is easy. To run the Tubeesview utility from a floppy, you can use a graphical Windows menu to start the

program. Alternatively, you can configure Tubeesview to run automatically when you start Windows. If you are using Windows 95/98/Me, then you can easily do this. This is done by creating a shortcut
