Adobe has still managed to irritate users with all sorts of issues. Yes, the average memory leak is much lower, and yes, the download size of the application has crashed. But reveal a forum thread, and you will find more than 2,000 users complaining about their version 2.9.6 suddenly crashing, and they didn't even have time to update until the new build too late. If you really want to know what you can do with the download size, try downloading it with Wget. It's a command-line file geter for command-line users. The latest update, which Adobe calls both Version 24 and Photoshop 2023, brings technology announced at the annual Adobe Max conference in October. Highlights include simpler, more accurate Object Selection; One Click Delete and Fill, a new way to remove an object from a scene; and integration with Adobe Express. New features still in beta include Live Gaussian Blur, Live Gradients, a new Neural Filter for photo restoration, and Share for Review—another collaboration feature. For Windows users, a new option lets you choose whether you want auto selection to happen faster or with more stability. Adobe has been responsible for a lot of the high-quality photography software that came out over the last five years. I wasn't a big fan of Elements, the others were pretty good, but Photoshop is my software of choice for most of the creative work I do. It seems that over the past three years, that's starting to change. Photoshop has better, more planned roadmaps for the next year or so, if you want them. But I don't expect this to happen as fast as it did with Lightroom.
