Adobe Photoshop CC is a powerful graphics editing application that allows you to edit images like a professional. The application is filled with features to give you complete creative control over images. You can use the Spot Healing Brush to remove spots and blemishes, and the Smart Fix function for quick and precise photo editing. Let's say you have two photos taken of a landscape, for example — one of the landscape on its own, and another showing just a small portion of its surroundings. You're looking to create an image showing only from the top of the landscape shot, but still retaining the fullest information. With an important object such as a tree filling the framing of the image, you'd still need plenty of room to show the full object. For this step, we'll use the same object from the basic tutorial. You can either select the section of the photo with the subject using the Selection tool, or you can select it with a few different options in the Select menu. You'll also need to add a layer mask to the photo (see step 3) so that you can hide parts of the subject that you don't want to be part of the final image. Once you've selected your subject (in the image above, the tree is under the car), take a digital photo of it using the **Shoot Raw** option. This should take you straight to the RAW camera settings, letting you then make any adjustments you need to make in postproduction. This will let you shoot the photo through any camera's settings, rather than be limited to those of your camera.
